

Mannatech's NSF-Certified Products

What is NSF?

Known as The Public Health and Safety Company™, NSF International is:

- A not-for-profit consumer product certification organization
- A world leader in standards development, product certification, training and education and risk-management for public health and safety
- The ANSI-accredited certifier of dietary supplements, functional foods and dietary supplement raw ingredients

Contents Tested & Certified

NSF verifies that:

- A product's label reflects the contents of the supplements
- All the ingredients are openly disclosed on the label
- The product meets purity standards

Additionally, NSF assesses each manufacturing site to ensure it complies with current Good Manufacturing Practices (cGMPs). NSF will not certify a product unless the manufacturer meets this rigorous audit.

- Products must be re-certified yearly
- Products must be manufactured by a NSF GMP-audited facility

Why is NSF Certification beneficial?

Overall, it supports product sales in the following ways:

- Builds more confidence, trust and credibility in the Mannatech brand
- Instantly acknowledges that Mannatech takes extraordinary measures to ensure your products meet the highest standards of safety, purity and quality
- Assures your customers that not only Mannatech, but also an independent third-party organization, has certified and tested manufacturing processes according to cGMPs
- Communicates to customers that Mannatech offers only top-quality products that are scientifically tested
- Differentiates Mannatech products from the competition—of the many thousands of dietary supplements sold in the United States, only a handful have been NSF-Certified
- Provides peace of mind for your customers who are concerned about dietary supplement safety
